1: Rivers E-5 (ca. 1901-02) 1906 Toda

512 collect firewood and procure the leaves used as plates and drinking vessels; others may carry out any necessary tendance which the buffaloes require, or may go to fetch grain or rice [623] from Badaga villages or from the bazaar. The chief men of the village may perhaps have to attend a meeting of the *naimi*, or council, which holds very frequent sittings to adjudicate upon the many disputed points which arise in connexion with the intricate social organisation of the people.

252 While the men are doing their work, the women will have 356 been seeing to their special tasks, of which three, represented 412 in Fig. 11, have come to be regarded as pre-eminently woman's work.

462 They pound the grain with the *wask* in a hole situated in 512 the middle of the floor of the hut,[1] and when the pounding is finished the grain is sifted with the *murn*, or sieve, and the hut is swept with the *kip*. It seemed that pounding grain is normally performed wearing the *tadrp* only.

237 Though these are the three operations which are regarded 296 as pre-eminently woman's work, the women have other things 356 to do. They rub the seats or beds both inside and outside 462 the hut with dried buffalo-dung, and use the same material to 531 cleanse the various household utensils. They mend the garments of the family, and some women devote much time to the special embroidery with which they adorn their cloaks.

512 The ordinary routine of the day is often broken by the 574 visits of people from other villages, who may have come to talk over a proposed marriage or transference of wives; to announce some approaching ceremony; to discuss some business connected with the buffaloes, or perhaps, but probably rarely, to pay a friendly call. Such a visit will probably give 574 the opportunity of observing the characteristic Toda salutation 576 shown in Fig. 12.[2] This is essentially a salutation between a woman and her male relatives older than herself. If a man

[1] For the purpose of photography, a hole was made outside the hut exactly like that within the hut. The picture must not be taken to indicate that pounding is ever normally performed out of doors.

[2] The old man on the right in this picture shows a very characteristic Toda attitude, in which a person crouches down completely enveloped in the cloak.

1: Rivers E-5 (ca. 1901-02) 1906 Toda

by being isolated for a day and night in a small pen in the sacred woods of the *ti*, during which time he is deprived of food, though allowed access to water. Marshall also states that it is permissible to introduce a bull from an ordinary drove "after due sanctification." Though I failed to obtain definite confirmation of Marshall's statement, it is possible that something of the kind may at one time have taken place or may even still take place.

At the present time the buffaloes are tended entirely by males, and males only are allowed to take any part either in the work of the dairy or in those dairy operations which are performed in the house. There is a tradition that at one time women attended to the buffaloes at the time of calving, and one incident is recorded in which women performed Cæsarian section on a dying buffalo (p. 78), but this custom has now long ceased to be followed.

The first buffaloes were created by one of the chief Toda gods, On, and his wife. The buffaloes created by the male deity were the progenitors of the sacred buffaloes, while the ordinary buffaloes or *putiir* are descended from those created by the wife. Certain other buffaloes are descended from ancestors created by other gods, but the account of their various creations may be deferred till the chapter containing the legends of the gods. I was told by some that the sacred buffaloes were descended from a sambhar deer, but it was later found that this was only believed to be true of one special group of buffaloes belonging to one clan.

Dairy Procedure

The general plan of the dairy procedure is the same in all dairies, the difference between different dairies lying chiefly in certain formalities accompanying certain stages of the procedure.

The day's operations begin with the churning of the milk drawn on the previous evening. The milk is poured from the milking-vessels into earthenware pots, and during the night it will have coagulated. The coagulated mass is first broken up by the churn; water and butter already made are added,

There is a legend that the original buffaloes of this herd

173 were sent from Amnodr[1] by the god On to the people of Taradr.
234 A long time after they came to Taradr the herd was on the
462 point of dying out, only one cow buffalo remaining, which
793 was so old that it had lost its teeth. This sole survivor was pregnant, and when about to calve the delivery was much delayed, and it seemed that the buffalo would die before the calf was born. Only women were present and they cut open the belly of the buffalo and took out the calf, which was tended very carefully and lived, and the existing *kugvalir* are descended from this calf.

This story preserves a tradition of the practice of women attending to the buffaloes at the time of calving, which is said to have been at one time the regular practice.

292 The *kugvalikartmokh* sleeps in the *kwotars* or calf-house,
513 except at Taradr, at which place he sleeps in the outer room
784 of his dairy. He is allowed to sleep in the ordinary hut on
793 certain nights in the week, and may only have intercourse with Tarthar women.
834 He wears the grey garment, or *tuni*, which he ties round his waist when churning and wears over his shoulders when milking.

234 The work of the dairy is carried out on the same general
788 lines as that already described, but with certain distinguishing features.

All the work is done *kabkaditi*; the dairyman never turns his back to the contents of the dairy. In those villages in which he sleeps in the calf-house he goes naked (except for the *kuvn*) to the *kugvali*, washes his hands, prostrates himself at the threshold, enters, and puts on his *tuni* which is kept on the *patatmar*. He salutes the *mani*, which he feeds with curd and milk as in other dairies. He also knocks on the *patat* three times, saying "*On*" each time.

234 As in the other village dairies, he only prays and lights the
415 lamp in the evening. When he gives out buttermilk, he
788 must use the vessel called *pòlmachok*. He drinks buttermilk (*peputi*) in a distinctly more ceremonial manner than in the ordinary dairy, sitting on the seat (*kwottiin*) outside the dairy, and pouring from the *ertatpun* into a leaf-cup made of two

562 community towards the sex. The laws regulating the relations of the dairymen with women also can hardly have contributed to raise the esteem in which they are held. The special ceremonies in which women are concerned involve various disabilities due to the ideas of impurity connected with these ceremonies. The seclusion-hut of a woman has attached to it the same ideas of impurity which attach to a corpse or its relics.

562 Not only are women excluded from any share in the work of the dairies connected with the sacred buffaloes, but they are also prohibited from any part in the milking of the ordinary buffaloes or in the churning of their milk, which is performed solely by males in a part of the hut with which women have nothing to do. It seems that at one time women had the one function of tending the buffaloes at the time of calving, but even this is no longer allowed them.

In other household matters, the duties of women are very limited in scope. Their chief work is the pounding and sifting of grain, the cleaning of the hut, and the decoration of clothing. I am doubtful whether they are allowed to cook, at any rate to cook food in which milk forms one of the ingredients. With such occupations as divining and sorcery they have nothing to do, but one woman has the reputation of possessing the powers of healing which belong to the *utkòren*.

562 I could not learn of any matters of social importance in which women are consulted. When collecting genealogies in Torres Straits, I found that women were often repositories of this important branch of knowledge, but I received no indication that this was the case with the Toda women, though I cannot say definitely that they may not have possessed some knowledge of this and cognate subjects.

Though thus unimportant in ceremonial and of little influence in the regulation of social affairs, women have nevertheless much freedom. In general social intercourse the two sexes always seemed to be on the best of terms, and I never saw or heard anything to indicate that women are treated harshly or contemptuously.

1: Rivers E-5 (ca. 1901-02) 1906 Toda

produced by the evil eye. Their natural politeness also makes the Todas uncomfortable when they see others eating, and in the early part of my visit I sometimes dispersed a group surrounding me by taking sandwiches out of my pocket and beginning to eat.

I did not ascertain definitely who cooks among the Todas. I had some reason to suppose that all the cooking is done by the men and that the women have nothing to do with this part of domestic economy, but I am not clear about this. It is possible that it is only food containing milk which must be cooked by the men.

The Todas are an example of a people who have no native intoxicant, but they have now taken to alcoholic drinks, though I do not believe that they indulge in these habitually. The only occasions on which I saw Todas under the influence of alcohol were when they were returning from the bazaar on market days. I was only once asked by a Toda for alcohol and then by a woman. Tobacco is now largely used and opium is certainly also used, though I do not believe that it is taken in excess. It may be employed, however, as a means of committing suicide.

FIRE-MAKING

We have already seen that the fire used for several sacred purposes must be made by friction with the fire-sticks. The method employed is a variety of the drill method shown in Figs. 65 and 37. In the former the *wursol* of Taradr is making fire in order to enable me to procure a photograph; the latter is the result of a snapshot taken when the fire was being produced during a ceremony. In the horizontal stick, which is held firmly by the foot, a hole is made for the insertion of the vertical stick, and in this a little charcoal is placed. A small groove is cut on one side to assist the falling of the spark on the tinder beneath. The vertical stick is inserted into the hole and twirled between the two hands. In the only case in which I saw fire produced by friction in a ceremony (Fig. 37), the continued efforts of the two old men were unavailing, and a third younger man was called upon,

576 A wife never bows down before her *husband*; though she performs the Âdabuddiken before her father-in-law, mother-in-law, her husband's elder brother. CHAP IV

Now each one of the juniors or inferiors—being a female—approaching each of the seniors or superiors—both men and women—in succession, 'falls at his feet;' crouches on the ground before him, or her. On which he, or she, places first the right, then the left foot on her head. Such is the act styled Âdabuddiken.

As every man of the two parties has to perform this ceremony to every female, and each woman to each younger woman, and the men to salute one another and say 'Tcha!' the greeting of parted friends—which has to be carefully gone through, and which no sense of impatience or untimely levity ever occurs to abbreviate—is one that takes time. But the Toda has no wit, and plenty of time to spare and to waste.

152 593 Mr. Metz tells me he has seen a son fall at his mother's feet. But the act (a very exceptional one) was committed on the occasion of a funeral, when the family appeared overwhelmed with grief; and the man, actuated by his feelings, performed this token of respect and love.

157 576 Nothing but the natural good manners of the people hinders the ceremony of Âdabuddiken from becoming unseemingly slavish. But the cheerfulness of the women, and the men's grave politeness, admits of its being performed with entire good taste.

462 562 Toda women indeed, hold a position in the family quite unlike what is ordinarily witnessed amongst Oriental nations. They are treated with respect, and are permitted a remarkable amount of freedom. They perform the legitimate offices of women in Europe; tending children, cooking the family meals, bringing water from the spring, and cleaning the house and premises. Wearing mantles or togas—Putkuli—there is very little stitching to be performed; but they embroider the edges of the mantles which some of the men wear, with 531

2: Marshall G-5 (1870) 1873 Toda

CHAP. IV. blue cotton, in the fashion which some of the photographs in this book will show.

The turbulent cattle are tended solely by men and boys. And the men manage out-door affairs generally.

It is a quiet, undemonstrative, but intensely domestic people; domestic in the wider sense of viewing the entire family, to the last cousin, much as one household, in which everyone is everywhere entirely at home; each one assisting, with the steadiness of a caterpillar, in the easy, progressive task of emptying his neighbour's larder: no one exerting himself by one fraction to raise the family. The great feature in Toda organisation, is the all-absorbing power of his domestic attachments, which, like Pharaoh's lean kine, swallow up all other qualities.

If the Todas lose, in a material point of view, from deficient size in Acquisitiveness, and the propensities generally, yet they certainly are large gainers thereby in the quiet, even tenor of their domestic life, undisturbed by the wrongs of grasping, vindictive, overbearing natures. They no doubt have quarrels, in the course of which they—particularly the women—are known to use very high language indeed and expressive gestures, but they are mere pebbles in a brook as compared with the rocks that break the flow of other waters.

The men maintain their authority in the home circle very sensibly, and without attempt at tyranny; but I saw too a woman who, as was very evident, ruled her husband. She must have acquired this authority by means of some slight superiority in quality of brain, for she had no apparent vantage over him. I was so much interested in this repetition amongst an unambitious, retiring, and primitive people, of a well-known phase of married life in energetic folk nearer home, that I had hoped to induce the pair to present themselves to be photographed; and the temptation I offered would have succeeded but for their age, which made a long walk over the hills too great an effort.

4: King G-5 (no date) 1870 AW60 Toda AW60

The dwelling of the Toda, though in no way very remarkable, differs, nevertheless, from that of any other uncivilised people that I have met with. The walls are made of roughly planed boards joined with clay; the sides are not more than three feet high, by about twelve feet long, and the ends are gables about eight feet high, having slightly rounded points. The roof is made of reeds, and thatched with lemon-grass, a tall and very strong plant attaining a height of six to eight feet, having a strong perfume of lemon, and growing luxuriantly on the hills.

The whole structure is very substantially and neatly built, but there is no chimney, and the smoke from the fires pours out at the door and exudes from every crevice. The entrance is an opening just sufficient to admit a full-grown person on hands and knees, and is made to close from within. There is in front of the dwellings, partly enclosed by a low wall of loose stones, an open grassy space or court, which, owing to the nomadic habits of the Todas, is always of a fresh green. The huts are built close together on some naturally smooth knoll in clusters of three or four only, and not in villages; these family groups are called *munds*.

There is always one hut set apart for the reception of milk, and this is placed a little to one side of the other huts, which in construction it precisely resembles. It is entirely surrounded by a low wall, within which no females are permitted to enter on any account, nor are they allowed even to milk the buffaloes; a custom or rule which I have found existing also among the Kaffirs of South Africa.

The *munds* are situated at considerable distances apart, and their inhabitants migrate periodically from one to another for change of pasture. During the dry season—that is, from the beginning of January to the end of April—they are in the habit of setting fire to the grass, with a view to promoting its better growth; another Kaffir custom, and one, moreover, the beautiful effect of which at night will be remembered by all who have ever seen it on so large a scale.

Before leaving, the Todas close the entrances to their dwellings, but take no further care regarding them. I found several times in the course of the three years that I spent on these hills, various *munds* suddenly deserted, and again, after an interval of some two or three months, as suddenly reoccupied. As there was nothing to prevent any curious person from entering these empty huts,

4: King G-5 (no date) 1870 AW60 Toda AW60

that used by the natives of South Africa. All vegetable food, except the wild fruits which they gather themselves, such as yellow blackberries, wild plums, the hill-gooseberry,* or cherry, as some call it, is obtained from the Vadacas, as already explained. This consists generally of green pulse, barley, millet, and other seeds, which it is the women's duty to winnow and grind, performing the latter operation between two roughly formed circular stones, the lower one fixed, and the upper revolving on it, similar to the ancient querns of Great Britain. It is singular that, though so attached to their buffaloes, the Todas keep no other domestic animal, not even the ubiquitous dog, the companion of man in every quarter of the globe from the polar regions to the equator. I never once saw or heard of a dog in any of their *munds*. This peculiarity, by the way, was specially remarked as a distinguishing trait in the history of the people of the European Drift period; and the dislike, and even abhorrence, evinced towards that animal by the ancient Jews is well known.

I should have mentioned that the Toda tribe is divided into two classes—the sacred, and what may be called for want of a better term the lay. The latter and more numerous class are called *Khootas*, whilst the former are known as the *Terrallees*. These appear to stand in regard to the rest of the community somewhat as did the Levites of old to the children of Israel, as it is from among them alone that the priests can be elected. No marriage can by Toda law take place between these two classes, though it is now sometimes evaded, and the breach winked at. Moreover, a priest, so long as he holds that office, cannot marry, and must keep aloof from all others, excepting those who, like himself, are invested with the sacred character. In order to qualify for this, however, he has to undergo certain initiatory ceremonies and trials, such as long fasting, sleeping in the forest, naked and alone, for several nights in succession; the danger from wild beasts, and the endurance of the chill night-air of these elevated regions, being deemed sufficiently severe tests of his fitness for the office. When fully appointed, the chief priests are distinguished by a different dress from their *confrères*. The subordinate priests, or coadjutors, whose native title, like the

* *Physalis edulis*, a plant about twelve to eighteen inches high, bearing bladder-like pods, enclosing a round yellow fruit, about the size of a common gooseberry, of a very agreeable subacid flavour.

TODA MENSTRUATION PRACTICES*

By

M. B. EMENEAU, Yale University.

841 121 The Todas of the Nilgiris in South India in the regulations governing women during menstruation are as peculiar as in many other of their institutions. In the account of their regulations which is presented in this paper this will be shown by reference to the regulations of the communities surrounding them.

841 171 During this period Toda women are not secluded, as they are by the Kotas and Badagas of the Nilgiris and by most other communities of India. They remain in the one-room houses of the tribe and no restrictions are placed on their contacts with ordinary men. Sexual intercourse is forbidden, but other physical contacts are allowed. E.g. they may sit on the same seat as a man and may assist a man or be assisted by him in dressing the hair, bathing etc. Contact is always avoided even in the woman's normal state [607 614] with a man of the same patrilineal sib or with a man of the same matrilineal line,[1] but during menstruation no further restrictions are imposed. They cook as usual ; this again is in marked contrast with the practice of other communities of India. The taboo on sexual intercourse during a woman's [684] menstrual period is apparently broken at times ; no penalty is applied either to the man or to the woman if such breach is discovered. A man however [793 234] who has had such intercourse may not become a dairyman-priest until after the next new moon.

841 778 234 [462] The period involves however an even stricter seclusion from contact with the dairy-complex than is usually enjoined on the Toda women. The restriction on a man's becoming a priest after intercourse with a menstruating woman has just been mentioned. Normally women may drink buttermilk from the dairies, and it is the women's task to take receptacles to the line of stones marking off the houses, or profane part of the munds,[2] from the dairy and its grounds, in order that the priest may fill them with buttermilk. Both these practices are forbidden for menstruating women. Even during their

---

[122] * This paper was written during receipt of aid from the American Philosophical Society (Penrose Fund), to which I must acknowledge my gratitude.

[113] 1. See my paper "Toda marriage regulations and taboos" in *American Anthropologist* 39. 103-12.

[361 778 646] 2. A mund is any place where the Todas live or carry on tribal activities which are localized, e.g., funerals or dairy operations. In my paper "Toda culture thirty-five years after" in *Annals of the Bhandarkar Oriental Research Institute* Vol. XIX, pp. 101-121, I have outlined the nature of the munds and have shown that those at which the people live are typically made up of two parts, a dairy-complex which is a god, and a profane part where the houses are.

[p. 82]

13: Peter E-5 (1939, 1949) 1963 AW60 Toda AW60

ears pierced ceremonially, this again being reserved exclusively for men, for whom the utilitarian motive of the ritual seems to be completely non-existent. Toda boys put on the *kuvn* (perineal band) when they are five years old. The girls are given their wraps at the age of three. Children are separated from each other in accordance with their sex when, at eight, they start their respective social occupations.

It will be apparent from the above that members of the male sex receive preferential treatment among the Todas. This is something which strikes the observer at once, the advantageous social role of the men being very much in contrast to the subordinate one of the women. Nevertheless, it cannot be said that representatives of the female sex are, on the whole, badly treated. On the contrary, they have a free and easy look about them, and are, as a rule, well-cared for by their men folk. It is merely evident that they suffer from some very distinct social disabilities.

Thus Toda women are expected to deal with such household duties as pounding the grain in the house, sifting it, sweeping out the hut, making the *ertülkh* or sleeping platform and seat inside the *arsh* with cow-dung and mud, mending clothes and sometimes embroidering. They are also in charge of cooking, although Rivers thought, erroneously, that they could not deal with this domestic duty. They may also milk the ordinary buffaloes or *putir*, something which Rivers also mistakenly denies. There are, on the other hand, a number of feminine "musts'. A Toda woman is obliged to greet all male relatives by putting her head under the man's feet in what is known as the *kalmelpudithti* salutation. When she goes back and forth from the *mad*, she is compelled to follow a special path, the *majvatiththkalvol*, and may not use the ordinary one taken by men and outsiders. A stone, the *majvatvaiirn*, marks the point nearest to the dairy-temple at which she must stop. It is here that butter-milk (*maj*) is distributed to the womenfolk every evening at sunset by the dairy priests. They must not handle it, furthermore, when they are menstruating.

Woman may only exceptionally enter temples at funerals when the body of a man rests in the ante-chamber. They are excluded from most religious ceremonies and at the yearly procession through the village of Kiur, they must vacate the *mad* completely before its arrival. Women are not allowed to attend the sacred buffaloes (*postir*), or even to approach their pens. They may not drink their milk and are only allowed the buttermilk and the butter after it has been processed by the dairyman-priest. They cannot cross the dairy's stream (*pal nïpa*),
